

miraël manulsei and luoi were returning back to their documentation efforts of the first few weeks when ascende and perma changed their skins into multispecies ones

after three months of wearing the body signal recoders and correlating audio video recordings, they as well as the dancers and luoma were now most of the time working researching without so much recording

the dancers and luoma spent much time now with the integration of their new cells and the abilities it brought for their body sensations ... the seven still continued to draw how they felt their inner light was travelling inside their bodies

ascende perma and nila were doing not too much neither but mostly enjoying themselves

mundu was quite busy going around on awahi to enjoy smooth encounters with wildlife, collect urine and feces of wild animals, feathers and skins being given to the environment in purposefull actions... there were sometimes acts of violence involved around the body parts mundu found, bu he asked himself if there was hunger involved as the motivation for a killing... the remains might not be that negatively charged compared to for example a researcher capturing a live free living animal in order to take live cell samples of it without its consent

mundu did cultivate much of the cell material in his field lab on awahi, some of the cultivated remixes or several cell types having grown into each other the slow and peacefull way, some of these cultures he did send to risap where luoma and the dancers nandoref ava rumu were bathing with them

other parts of this sendings from awahi were cultivated in the petri dishes in the city appartement of rasip under the tireless attention of mansulei who was now still not bathing with the others in the life rich semi-natural pool

he stayed strictly human, having a sober and most objective view on the metamorphosis what happened both in the petri dishes as well as with the human experimenters themselves

now five months after perma and ascende started to change, there were hundreds of successfull animal plant , plant human, human animal.... cell intergrowings both in the petri dishes as well as in the semi-natural pool where all except mansulei bathed regularly

miraël and luoi were sometimes swept away with emotions and inner light journeys ... when they were done with the documentation work

looking at it from a bit afar, and when reading the comments and suggestions of the several dozen follower of the research, the ones watching both the microscopic camera live streams as well as the dancers bathers and documenters enjoying and working... the feeling arose after an other month like this... now a half year the research ongoing... the feeling arose as to put another step forward... perhaps presenting the documentation as well as opening access to the many thousands of live recordings both micro of the petridishes and macro of the whole appartement.... allowing a wider audience to share the gathered material so far

there was also all this hundreds of hours material audio and video recordings correlating to biosignal recordings with the formulated intent to provide a database for visualising the nerve signals from snsory inputs into a truthfull manner and possible find out how internal imaginations affected the body directly...

it was at this time when both the fans of the research as well as the contributors felt it was ready to go one step more public.... that ascende perma and nila were contacting the appartement in risap

they were planning to stay a bit longer offline as to deepen their cellular growings and keeping their focus totally onto their encounters with each other and their natural surrounding

perma ascende and nila were listening intensive to mansulei when he tried to give a brief overview what happened in the risap city appartement during the last five months

especially happy made them to hear how mundu was able to cultivate the animal material he found with plant and human material in his field laboratory in awahi they agreed that it would a good time now to present all the so far gathered data both documented and analysed as well as the uncommented raw life streams .... for free to the general public with no restrictions attached as how everyone could use the insights and methods found by their research

mundu was also calling in at this moment, him too being still unchanged like mansulei, not because he really did not wanted to become multispecies ... but he felt attracted by the mindset of mansulei what consisted of an unexcitedness and cool detachment

what still had a warm glowing sympathy for the overall goal of the project to allow humanity to evolve into a more complete a more whole being

mundu too agreed on the plan to present a compilation of their gathered data and successfull cultivations to an even wider audience, without paywalls or asking for contributions

but... he was emphasizing in the discussion what how to present... there could be mentioning of what kind of magnitude of finances could further this or that branch of the several types of research they were into

and directing attention onto the various fields they have not yet ventured into for example the build of the skeleton

everyone agreed on that too so the next three months went by with mostly mansulei luoi and mirael producing all the documentary and overviews with the projections for future milestones to be reached with this or that much both human researchers time investment as well as with this or that much financial backing

after 8 month since perma moved in to the rasip city appartement, mansulei as the leading author together with his documentary assistant presented a 300 pages paper with many links to online video and audio recordings, body signal recording sets ...

it found a overwhelmingly amount of interest both in the acadamic field as well as with the future enthusiastic laymen and laywoman or more gender neutral said ... the ones who hoped utopia would once be able to built on earth with the sensitive use of technology, balancing esoteric with exoteric knowledge to end the killing

money began to pour in with small amounts but many millions contributed, unasked for

some popular science journals and gadget news sites were picking the report up and celebrating it as of its both entertaining and fantasticly inspiring contents as well as lauding the professionally scientific conclusioning comments descriptions and well named links to the various types of audio/video/signal data sets

within these millions of fans who sent some 10 to 100 money were also a couple of thousands who were asking how they could participate in the research, if they could get some samples sent to them for a bathing upgrade and or cultivate the

evolved cells at home in petri dishes  
some wanted to visit the rapis place to enjoy bathing with luoi luoma ava rumu and andoref...  
so it got busy in pasir ....  
miraal and mansulei found their work to be done sufficiently and wanted to go back to south arimca to see both places the house in palosa as well as go sampling in the rainforest places ascende money helped to secure  
they left one day after the report was presented  
on the second of january 2022  
a week later a letter arrived in paloso  
of a famous entrepreneur who made several billions with future benefitting technologies  
( no mentioning specifics here as not wanting to assimilate a real currently active entrepreneur with this fantasy... ) but let us assume this visionary entrepreneur would have built several multistorey high vertical farm buildings in major millionpersons cities all over the globe selling the produce at a little lower price than at the local market

the letter was having a proposal in it ... that mansulei and miraal would help him build up a 100 million investment plan as to commercially produce androids what would be sold for reasonable prices  
higher than what the researchers have proposed but still under ten thousand  
also they were able to use all of the research and intellectual data of this venture in any way they liked

miraal liked that bit with being able to use all the gathered knowledge gained with a abundantly prefinanced roll out of products... while mansulei was cautioning that most of the necessary research and construction samples materials were not yet here in the present but depending of the engagement of thousands of researching hours waiting to be contributed in an equally leveled mind fashion  
they wrote all that the same day in a letter to the entrepreneur, answering with a fundamental yes they would love to help roll out hundred thousands of androids for no more than ten thousand the piece  
but the necesssry research till it would be ready for production could well need 3 years for example with 50 000 research hours invested by perhaps 50 to 500 researchers.... with that being the question miraal and mansulei asked joho the entrpreneur... how could we find these fellows and will they too be allowed to build on top of the research ....  
the next day an email came from joho...  
i am so happy you are going to help doing this... everyone working on this project will be allowed to use all the data in a most open source way... i feel that wr do not need three years but a half one when 2000 researchers will join us.... me alone i know about 300 who will love to work on this especially also as it has this human evolution success what ascende, perma, nila, luoma, luoi, andoref, ava and rumu have shown ...

miraal and mansulei felt right about that offer of joho, they called ascende and perma on their secluded permaplace in the ancary islands ...  
ascende was crying tears of happiness when he heard of the bold plan to produce hundreds of thousands of androids in such a near timeframe and such a an

affordable price with all the intellectual material open source available... he and perma gave mirael and mansulei their blessing for this venture and thanked them from their very heart from having reported so whollisticly well on the groups research

miraël saying then... do not say goodbye to intensely, we will be back soon to crossfire the roll out of the 2000 euro dollar pound android for the masses, we might even find ways how people could grow their own android at home...

perma now jumping in... yes, a kit containing our advanced 3d printer what gives enough time for flesh and bones finding their very own structures and building microcomponents to stack assemble with each other
